## Foreword

---

*Physics of Technology II Curricular Guidelines* is a model designed to assist in developing a rigorous and relevant course of study for Physics of Technology II, a course approved in the Secondary Science Program of Study (*Bulletin 741: Louisiana Handbook for School Administrators, 1997-2000*). The model includes a brief outline and more detailed course guidelines that embrace the core content essential skills and understandings embodied in *Compliance Handbook 308: Louisiana Science Framework* (May 1997)(formerly *Bulletin 1962*). It also presents a discussion of standards-based curriculum, the use of technology, inquiry-based science, laboratory safety, assessment, and the concept of rigorous and relevant learning for *all students*.

The intended audience for this publication includes science teachers, science chairpersons, supervisors of science, local curriculum developers, and school administrators who are involved in secondary science curriculum development and committed to high quality science education.

# Physics for Technology II

## Course Description

Physics for Technology II explores physics concepts relevant to the technological workplace using an applied approach. Studies include momentum, waves and vibrations, energy connectors, transducers, radiation, optical systems, and time constants. Practical problem-solving techniques are primarily taught through experimental team explorations. Mathematical skills through geometry are used in problem solving.

## Content Outline

- I. Getting Started
  - A. Cooperative Learning Strategies and Techniques
  - B. Mathematical Preparation
  - C. Measurement
  - D. Lab Readiness
- II. Momentum
  - A. Momentum in Mechanical and Fluid Systems I
  - B. Momentum in Mechanical and Fluid Systems II
- III. Waves and Vibrations
  - A. Characteristics of Waves
  - B. Applications of Waves and Vibrations
- IV. Energy Converters
  - A. Mechanical Energy Converters
  - B. Fluid Energy Converters
  - C. Electrical Energy Converters
  - D. Thermal Energy Converters
- V. Transducers
  - A. Transducers in Mechanical Systems
  - B. Transducers in Fluid Systems
  - C. Transducers in Electrical Systems
  - D. Transducers in Thermal Systems
- VI. Radiation
  - A. Electromagnetic Radiation
  - B. Nuclear Radiation

VII. Light and Optical Systems

- A. Ray Optics: Reflections and Refraction
- B. Wave Optics: Interference and Diffraction
- C. Laser Light
- D. Optical Systems

VIII. Time Constants

- A. Time Constants in Mechanical and Fluid Systems
- B. Time Constants in Electrical and Thermal Systems

Model Curriculum Guidelines

<b>Physics for Technology II</b>	
<b>TOPICS</b>	<b>BENCHMARKS</b>
<p>I. Basics</p> <p>A. Cooperative Learning Strategies and Techniques</p> <ol style="list-style-type: none"> <li>1. Determine and initiate the basic social strategies needed for cooperative learning groups               <ol style="list-style-type: none"> <li>a. Establish and use basic classroom policies and procedures</li> <li>b. Divide duties among group members</li> <li>c. Establish and evaluate actions of effective group members</li> </ol> </li> <li>2. Perform and rotate cooperative learning group tasks and activities in a variety of roles (facilitator/leader, recorder, materials manager, and clerk/time keeper)</li> <li>3. Work as a cooperative learning team to design, conduct, and present and/or report a solution to a variety of scientific investigations or explanations</li> <li>4. Communicate results after collecting and analyzing data</li> </ol> <p>B. Mathematical Preparation</p> <ol style="list-style-type: none"> <li>1. Develop problem-solving skills</li> <li>2. Manipulate and analyze quantitative data using scientific calculators</li> <li>3. Apply and utilize scientific notation, significant digit, and appropriate units of measurement in both English and SI systems of measurements</li> <li>4. Employ various methods of introduction of vectors</li> </ol> <p>C. Measurement</p> <ol style="list-style-type: none"> <li>1. Relate the metric (SI) and English systems of measurements to problem solving utilizing dimensional analysis</li> <li>2. Illustrate the graphical representation of data</li> <li>3. Compute and discuss error analysis</li> </ol>	<p>SI-H-A 1 SI-H-A 2 SI-H-A 3 SI-H-A 4 SI-H-A 5 SI-H-A 6 SI-H-A 7</p> <p>SI-H-B3 PS-H-A 1 PS-H-A 1 PS-H-E2</p> <p>PS-H-A 1 SI-H-A3, SI-H-B3 PS-G-A 1</p>

# Acknowledgements

---

The team of educators who developed this document is to be commended for their dedicated work and generous contribution of time and talent. The collaborative efforts of these experienced and committed professionals made possible curricular guidelines that reflect contemporary thinking about science education and that support high quality science education for *all* students.

We are grateful to local school districts that generously released the following high school teachers, the curriculum specialists, and supervisors to participate in this project.

Alicia Courville  
Calcasieu Parish

Tom Daniel  
Bossier Parish

Warren Sensat  
Lafayette Parish

The work for this project was coordinated by Gary Kratzer, Science Program Coordinator, Division of Student Standards and Assessments, Louisiana Department of Education. Special acknowledgement goes to Marlene Ritter, former Director of the Bureau of Secondary Education, who initiated the project. Sincere appreciation for technical editing is extended to Chris Parmentier, Division of Student Standards and Assessments, Louisiana Department of Education, for the development of the *Checklist for Safety in the Science Classroom*, a special thanks is owed to Martha Newchurch, Nicholls State University, and Julie Brown, LaSIP Site Coordinator, Nicholls State University.
