

STATE OF THE SECTOR PATHWAY INFORMATION

Automotive Services

OVERVIEW

If you enjoy working on cars and aren't afraid of technology, then a career in the automotive service industry may be for you.

Mechanics work with all of a car's parts and systems, from the brakes and air conditioning to the belts, hoses and steering. In smaller garages or companies, a mechanic must be familiar with all of these systems to diagnose customers' problems, but at larger garages, technicians may specialize in particular areas. Mechanics must be able to use a range of tools -- jacks, screwdrivers, electronic diagnostic equipment, etc., and have strong problem-solving skills to find and repair problems.

Automotive service technicians, or mechanics, are in demand in a variety of settings, including gas station garages, car dealerships and government agencies. The field offers a range of possibilities and the opportunity to specialize, particularly for people who complete technological training and certification
