Purpose

To assist teachers with the implementation of the PhD Science curriculum for grade 3, this document provides guidance for how PhD Science units correlate with the [Louisiana Student Standards for Science](#) (LSSS). The PhD Science curriculum provides ample instructional guidance for teachers. This Louisiana Guide to Implementing Great Minds PhD Science goes a step further to point out places in which teachers may need to make strategic decisions, considering student needs.

The PhD Science Grade 3 units are intentionally designed to provide students the opportunity to incrementally make sense of phenomena to build understanding and abilities over time through a coherent storyline. Modifications to the sequence or content of lessons within these units could undermine the design; therefore, they should be approached with caution and careful consideration.

This guidance document is considered a “living” document, reflecting the expectation that teachers and other educators will continue to identify opportunities for improvement as it is applied in practice. Please send your feedback to STEM@la.gov so that the LDOE can incorporate your suggestions when updating this guide.

Concept Focus by Module¹

Module	Concept Focus Questions
Module 1 Weather and Climate	Concept 1: How do we describe weather? Concept 2: How do people know what weather to expect? Concept 3: How can we plan for severe weather? Application of Concept - Engineering Challenge: How can people design better solutions to reduce the impact of weather hazards?
Module 2 Survival	Concept 1: What do fossils reveal about the past? Concept 2: How do organisms get what they need to survive? Concept 3: What happens to organisms when the environment changes? Application of Concepts - Engineering Challenge: How can we help monarchs survive in a changing environment?
Module 3 Traits	Concept 1: How can we identify individuals? Concept 2: How do individuals change over time? Science Challenge: How does water in the plant's environment influence the plant's traits? Concept 3: How do individuals get their traits? Concept 4: How do individual's traits affect their lives? Application of Concepts
Module 4 Forces and Motion	Concept 1: How can we describe and predict an object's motion? Concept 2: What can cause the motion of an object to change? Concept 3: How can an object move without being touched? Application of Concepts - Engineering Challenge: How can we use magnets to design a solution to help astronauts in space?
